

# We Taught an Old Dog a New Trick!

ChrisNik's HoundDog is built with new hi-tech **Fence Ignoring Technology** (FIT). The HoundDog can sniff out those hard to find survey markers under fences and around metal buildings.

The HoundDog works great with ChrisNik's Magnail®, MagSpike™ and MagHub™! Our new HoundDog locator with its patented technology will quickly become your *best friend!*

ChrisNik Introduces  
Our **NEW**  
**HoundDog**  
**Magnetic Locator**  
with **Fence Ignoring Technology**

We taught our **HoundDog** to find the positive (+) polarity at the top of ferrous metal objects while ignoring the negative (-) polarity found at the bottom. This allows **HoundDog** to ignore the bottom of a fence and easily find the top of buried magnails, rebar or other ferrous survey markers.

**Setting 1** (Normal Locator Mode) Detection of metal objects, (+) or (-) will be indicated with the familiar audio tone and red light.

**Setting 2** (Fence Ignoring Technology Mode)—When detecting a negative (-) or an object like the bottom of a fence. A green light comes on and emits a low steady audio tone ignoring the bottom of a fence. Then when detecting a positive (+) or an

object like the top of a survey marker a red light comes on and emits the normal locator audio tone. Helping you easily find your survey marker.
