Protective rotor cage is removable for full 360 degree coverage

Abnehmbarer Rotorschutz sichert vollständige 360° Empfangsebene

Cage de protection du rotor entièrement detachable pour une couverture de 360 degrés.

La gabbia protettiva del rotore e' removibile per consentire la visibilita' del raggio laser a 360 gradi.

La carcasa protectora del rotor se puede quitar para tener una cobertura completa de 360°

Afneembare rotorbescherming garandeert volledig 360° ontvangstniveau

Höljet för rotorn är avtagbart för full 360 graders täckning
Aftagelig rotorbeskyttelse sikrer et fuldstændigt 360° dækningsområde

A protecção do rotor amovível assegura o nível de recepção completo de 360°

Rotorens beskyttelsesdæksel kan tas av for 360 graders bruk/rekkevidde.

Irroitettava roottorin suojakehikko mahdollistaa esteettömän 360 asteen näkyvyyden.

Αποσπώμενο προστατευτικό κάλυμμα ρότορα για απόλυτη ασφάλεια επιφάνειας 360°

Съемная защитная бленда ротора обеспечивает непрерывный рабочий диапазон 360 градусов

Thank you for choosing one of the Spectra Precision Lasers from the family of precision horizontal lasers.

The LL100N is a simple-to-use laser that allows you to take accurate horizontal measurements, using a hand-held or rod mounted receiver.

FOR YOUR SAFETY

For hazardless and safe operation, read all the user guide instructions.

- Use of this product by people other than those trained on this product may result in exposure to hazardous laser light.
- Do not remove warning labels from the unit.
- The laser is subject to class 2.
- Never look into the laser beam or direct it to the eyes of other people.
- Always operate the unit in a way that prevents the beam from getting into people's eyes.
- If initial service is required, which results in the removal of the outer protective cover, removal must only be performed by factory-trained personnel.

Caution: Use of other than the described user and calibration tools or other procedures may result in exposure to hazardous laser light.

Caution: Using the unit different than described at the LL100N user guide, may result in unsafe operation.

COMPONENTS

- 1 Power Button
- 2 Battery LED
- 3 Manual/Standby Button (remote control)
- 4 Leveling LED
- 5 Manual/Hi-Warning LED
- 6 Up and Down Arrow Buttons (remote control)
- 7 Left and Right arrow Buttons (remote control)
- 8 Infrared-receiver for remote control
- 9 Removable Rotor Cage
- 10 Sighting Guides
- 11 Rotor/Beam Exit
- 12 Handle
- 13 Battery compartment/door
- 14 5/8x 11 Tripod Mounts
- 15 Rubber feet

How to Use the Laser System

Powering the Laser

Batteries

Installing Batteries

Open the battery door using your fingers, a coin or a screwdriver.

Insert batteries into the housing so that the negative poles are toward the bigger battery spiral spring.

Push down on the battery door until the latch "clicks" into position.

Laser Setup

Position the laser horizontally or vertically (tripod mount and rubber feet downward!) on a stable platform, wall mount or tripod at the desired elevation. The laser recognizes automatically whether it is used horizontally or vertically when switched on.

Note: The laser always operates in MANUAL mode in the Vertical position.

Turning On/Off the Laser

Press the power button **1** to turn on the laser.

Note: The laser always powers up in the automatic self-leveling mode. The LEDs (**2, 4** and **5**) are turned on for 2 seconds.

The laser is level when the leveling indicator **4** is no longer flashing (once every second).

For the first five minutes after the laser self levels, the LED **4** lights solid. After five minutes the LED **4** starts flashing every four seconds to let you know the laser is still level while conserving battery life.

If the laser is positioned beyond its self-leveling range of $\pm 8\%$, the laser beam, and manual and leveling indicators flash simultaneously. Turn the unit off, reposition the laser within the self-leveling range and turn it on again.

Note: If the laser is out of its self-leveling range and remains out of it for more than 10 minutes, the unit shuts down completely.

Note: After the laser has been level for more than 5 minutes in horizontal mode, the HI (height of instrument) alert activates. If the laser is disturbed (tripod bumped, etc.) so that when it re-levels the laser beam elevation changes by more than 3 mm (1/8 in.), the HI alert shuts down the laser and rotor, and the red LED flashes two times per second (twice the manual-mode rate). To restore level, turn the laser off and on. After the laser has re-levelled, check your initial reference elevation.

In order to switch the laser off, press the power button again.

Activating/Deactivating Standby Mode

Standby mode is a power-saving feature that conserves laser battery life.

Press and hold the remote control's manual button for 3 seconds to activate standby mode.

Note: When standby mode is activated, the laser beam, rotor, self-leveling system, and LEDs shut down, but the HI alert remains activated.

To let you know that the laser is in standby mode, the battery LED flashes every 4 seconds.

To deactivate standby mode and restore full operation of the laser, press and hold the remote control's manual button for 3 seconds.

The laser and all other functions turn on again.

Using the Manual Mode

In horizontal mode pressing the manual button on the remote control changes the laser from automatic self-leveling mode to Manual mode. Manual mode is indicated by the flashing (once every second) red LED 5.

In Manual mode (horizontal), the Y-axis can be sloped by pressing the Up- and Down-Arrow-buttons on the remote control. Additionally, the X-axis can be sloped by pressing the Left- and Right-Arrow-buttons on the remote control. To resume automatic self-leveling mode, press the manual button again.

In vertical mode, the laser is always in MANUAL mode. Pressing the up and down arrow buttons align the laser beam to the right/left side, and the left and right arrow buttons at the remote control adjust the slope of the laser beam.

To resume automatic self-leveling mode, press the manual button again.

Using the Y- Single Slope Mode

The Manual button on the remote control toggles the unit to Manual, the Y-axis Single Slope Mode, then Automatic Mode. To activate the Y-axis single slope mode, press the manual button at the remote control twice. This is indicated by the simultaneously flashing red 5 and green 4 LEDs (once every second).

In Y-axis single slope mode, the Y-axis can be sloped by pressing the Up- and Down-Arrow-buttons on the remote control, while the X-axis remains in automatic self leveling mode (e.g. when setting up sloped ceilings or drive ways).

To resume automatic self-leveling mode from Y-axis single slope mode, press the manual button again.

APPLICATIONS

General Construction

Determining the Height of Instrument (HI)

The height of instrument (HI) is the elevation of the laser's beam.

The HI is determined by adding the grade-rod reading to a benchmark or known elevation.

1. Set up the laser and place the grade rod on a job-site benchmark (BM) or known elevation.
2. Slide the receiver up/down the grade rod until it shows an on-grade reading.
3. Add the grade-rod reading to the benchmark to determine the height of instrument.

Example:

Benchmark = 30.55 m (100.23 ft)

Rod reading = +1.32 m (+4.34 ft)

Height of instrument = 31.87 m (104.57 ft)

Use this HI as a reference for all other elevations.

Using the Y-Axis Single Slope Mode

1. Set up the laser over the reference point (A).
2. Look over the rotor to align the laser to the desired direction hub in the axis that is supposed to be used in automatic self-leveling mode. Turn the laser on the tripod until it is properly aligned.
3. Attach a receiver to a grade rod. Set the grade rod on the self-leveling axis direction hub to check the laser's elevation (B).

Note: Use this HI as a reference for checking the alignment of the laser after setting the slope for the other axis.

4. Activate the Y-axis single slope mode by pressing the manual button at the remote control twice.
5. Check the laser's elevation on the slope axis directly in front of the laser.

6. Set the grade rod on the slope axis direction hub to adjust the laser's elevation without changing the height of the receiver on the grade rod (C).
7. Press the up and down arrow buttons until you get an on-grade reading on the receiver.
8. Recheck the laser's elevation in automatic self-leveling axis using the HI in step 3 (B).

If the HI has been changed, rotate the laser on the tripod until you get an on-grade reading again. Make sure, you DON'T change the height of the receiver on the grade rod.

CALIBRATION

Checking Calibration of the Y- and X-Axes

1. Set up the laser 30 m (100 ft) from a wall and allow it to level.
2. Raise/lower the receiver until you get an on-grade reading for the +Y axis. Using the on-grade marking notch as a reference, make a mark on the wall.

Note: For increased precision, use the fine-sensitivity setting (1.5 mm/1/16 in.) on the receiver.

3. Rotate the laser 180° (-Y axis toward the wall) and allow the laser to re-level.
4. Raise/lower the receiver until you get an on-grade reading for the -Y axis. Using the on-grade marking notch as a reference, make a mark on the wall.
5. Measure the difference between the two marks. If they differ more than 6 mm at 30 m (1/4 inch at 100 feet), the laser needs calibrating.

6. After checking the Y-axis, rotate the laser 90°. Repeat the above starting with the + X axis facing the wall.

PROTECTING THE UNIT

Do not expose the unit to extreme temperatures or temperature changes (do not leave inside the car). The unit is very robust and can resist damage if dropped even from tripod height. Before continuing your work, always check the leveling accuracy. See **Checking Calibration** section. The laser is water protected and can be used indoors and outdoors.

CLEANING AND MAINTENANCE

Dirt and water on the Rotor/Beam Exit (Component 11) will influence beam quality and operating range considerably.

Remove dirt on the housing with a lint-free, warm, wet and smooth cloth. Do not use harsh cleansers or solvents.

Allow the unit to air dry after cleaning it.

PROTECTING THE ENVIRONMENT

The unit, accessories and packaging ought to be recycled. All plastic parts are marked for recycling according to material type.

Do not throw used batteries into the garbage, water or fire. Remove them in compliance with environmental requirements.

Warranty

Spectra Precision LLC warrants the LL100N to be free of defects in material and workmanship for a period of 2 years. Spectra Precision LLC or its authorized service center will repair or replace, at its option, any defective part, or the entire product, for which notice has been given during the warranty period. If required, travel and per diem expenses to and from the place where repairs are made will be charged to the customer at the prevailing rates. Customers should send the product to Spectra Precision LLC Inc. or the nearest authorized service center for warranty repairs or exchange, freight prepaid. Any evidence of negligent, abnormal use, accident, or any attempt to repair the product by other than factory-authorized personnel using Spectra Precision LLC certified or recommended parts, automatically voids the warranty. Special precautions have been taken to ensure the calibration of the laser; however, calibration is not covered by this warranty. Maintenance of the calibration is the responsibility of the user. The foregoing states the entire liability of Spectra Precision LLC regarding the purchase and use of its equipment. Spectra Precision LLC will not be held responsible for any consequential loss or damage of any kind. This warranty is in lieu of all other warranties, except as set forth above, including any implied warranty merchantability of fitness for a particular purpose, are hereby disclaimed. This warranty is in lieu of all other warranties, expressed or implied.

TECHNICAL DATA

Leveling accuracy ^{1,3} :	± 3 mm/30 m, 1/8" @ 100 ft, 20 arc seconds
Rotation:	appr. 600 rpm
Operational area ^{1,2} :	appr. 350 m (1150 feet) diameter with detector
Laser type:	red diode laser 650 nm
Laser class:	Class 2
Self-leveling range:	appr. ± 5°
Leveling time:	appr. 30 sec
Leveling indicators:	LED flashes
Laser beam diameter ¹ :	appr. 5 mm
Operating range using remote control:	up to 30m (100 ft)
Power supply:	2 x 1.5V Mono cells type D (LR20)
Battery life ¹ :	alkaline: 80 hours; NiMH: 35 hours
Dust- and waterproof:	IP54
Operating temp.:	23°F...113°F (-5°C ... 45°C)
Storage temp.:	-4°F...158°F (-20°C ... 70°C)
Tripod attachments:	5/8 x 11 horizontally and vertically
Weight:	1.5 kg (3.3 lbs)
Low voltage indication:	flashing/shining of the battery indicator
Low voltage disconnection:	unit shuts off

1) at 21° Celsius

2) under optimal atmospheric circumstances

3) along the axis

DECLARATION OF CONFORMITY

We

Spectra Precision (Kaiserslautern) GmbH declare under our sole responsibility that the product LL100N to which this declaration relates is in conformity with the following standards **EN 61000-6-3:2007 + A1:2010, EN 61000-6-2:2005 and EN 60825-1:2014**

following the provisions of directive Electromagnetic compatibility **2004/108/EC**.

The managing director

Electro-Magnetic Compatibility

Declaration of Conformity

This digital apparatus does not exceed the Class B Limits for radio noise for digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

This device complies with part 15 off the FCC rules. Operation is subject to the condition that this device does not cause harmful interference.

Note: The product been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. The product generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception, which can be determined by turning the product off and on. The user is encouraged to try to eliminate the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the product and the receiver.
- For more information, consult your dealer or an experienced radio/television technician.

Caution: Changes or modifications to the product that are not expressly approved by Spectra Precision LLC could void authority to use the equipment.
